

TrustView: ADCS Module

With the ADCS module, you get an efficient web-based interface to your Microsoft ADCS, which facilitates handling and provides an overview of your internal PKI in everyday life

Improved interface

With the ADCS module you get an improved interface to your internal PKI, from which you get one overview of the current status and can carry out all common operations such as issuing, approving and blocking certificates.

Overview at all levels

The ADCS module gathers all information about everyone your internally issued certificates, for example computer, client and Kerberos certificates. You can then get an overview based on specific issues, for example:

- Overview of upcoming certificates that has expired and must be renewed manually.
- Overview of certificates that use a short key length and therefore constitute a security risk.
- Overview of certificates issued with outdated signing algorithms, for example SHA-1.

This way you get both an operational overview and opportunity to document that you live up to best practice within the use of internal certificates.

Streamlined workflows

When you have to manually issue certificates from your internal PKI, the entire process can be completed simply from TrustView with the ADCS module.

- Generation of key pairs takes place directly in TrustView using the ADCS module and is stored encrypted in the database.
- The certificate request is sent automatically to your internal PKI.
- The certificate request is approved in TrustView using the ADCS module and subsequently issued by your internal PKI.
- Certificate and private key are sent to recipient via separate channels (email, SMS and download or combinations thereof). All common formats like PKCS #12, PFX, PEM and JKS etc. are supported.

Top security

With the ADCS module in TrustView, you can add an extra level of security by shielding your internal PKI in the IT infrastructure. Administrators no longer need to log in directly to your internal CA to issue, approve and block your internal certificates.

Contact us

Would you like to hear more about the possibilities with the ADCS module. Then contact us on tel. +45 70 60 50 24 or write to sales@trustskills.com.
