

TrustView: MitID Erhverv Module

With the MitID Erhverv module, TrustView can handle organization and system certificates and give you the option of automatic renewal of the certificates

MitID Erhverv certificates

MitID Erhverv offers the option of issuing organization and system certificates. These are typically used for system-to-system communication.

If you have more than a few individual certificates, it can be a big challenge to keep an overview of all the certificates. If the certificate is not renewed and expires, it often means downtime for the affected services, which can be a big inconvenience for you and your customers.

With TrustView you get a comprehensive overview of your MitID Erhverv organization and system certificates, and you can immediately see where and when a certificate needs to be renewed.

Features

It is possible to issue the certificates directly from the TrustView platform, so you avoid the certificates being issued locally on the individual employee's workstation. It is also possible to renew organization and system certificates directly in the solution, so that all administration takes place in one integrated system.

Export of the certificates is supported in all common formats, e.g. .PFX and .JKS directly from the interface including history, so it is clear who the certificates have been distributed to.

All users on TrustView can opt-in for expiry notifications, so that notifications in connection with expiry are not only sent to a single contact person, but to all active TrustView users.

From NemID to MitID Erhverv

In connection with the migration from NemID to MitID Erhverv, most organizations will for a period have both certificates from the new and old eID infrastructure. TrustView supports both MitID Erhverv organization and system certificates as well as company and function certificates from the NemID infrastructure, so that you are fully covered during the entire migration period.

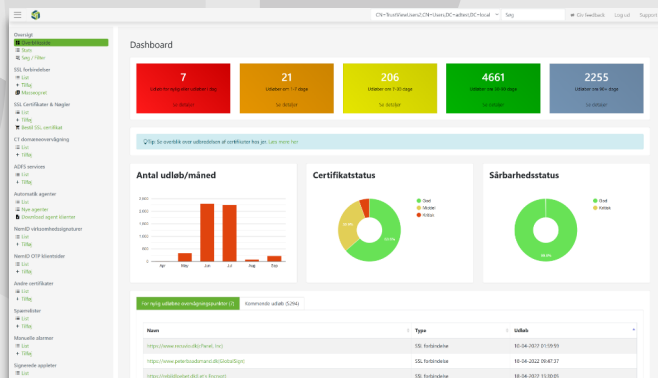

Automation with API

TrustView also offers an API so that you can fully automate the processes around the renewal and deployment of your MitID Erhverv certificates, if you wish.

We help you get started

To give a good introduction to this module, the installation includes a get-started workshop for your managers.

We review here together with you how you can easily and simply handle all your MitID Erhverv certificates in TrustView.
